# Equine Nutrition Consultancy

Applied equine nutrition science for horse's health and performance

## PASTURE MANAGEMENT & DESIGN Consultations for Pony Clubs

Horse health is directly related to soil health. The grass they eat is only as good as the soil it grows in. Our interactive consultations will empower your club to take a serious look at Site Design & Pasture management. Using PERMACULTURE DESIGN principals. Techniques for soil creation and fertility, carbon capture and storage, increase the productivity of equine systems. Natural systems and nutrient flows, increasing Biologically and sustainable closed system management of your land and reducing the need for inputs from external sources, while increasing the health of your horse, soil and saving you MONEY over the life of your investment. Turning around very poor and extremely unhealthy (Almost Toxic) pastures and the soil is where it starts. This education introduction will become of high value to you over time, the added value to your CLUB and the confidence that you will gain to move forward to a sustainable biodynamic system of equine management.
